

Valves

(Needle Valve, Ball Valve, Diaphragm Valve, Gauge Valve, Check Valve, Excess Flow Valve, Relief Valve, Cylinder Valve)

Technology for a Better Future

Company Overview

Genstar Technologies Company, Inc. (GENTEC®), founded in 1969, is a global industry leader in the manufacturing of welding apparatus, pressure regulators, and gas control systems.

It is GENTEC®'s mission to provide customers with high quality, value-added products and services that surpass the strictest safety standards. All GENTEC® products are manufactured in an ISO 9001 and ISO 13485 certified facility by our experienced and dedicated workforce, using exquisite craftsmanship in conjunction with computerized automation, stringent quality control, and advanced test equipment.

Additionally, as a total system solution provider, GENTEC® offers technical support, on-site evaluation, and design / implementation. GENTEC® engineers examine all customer requirements in order to develop and recommend the best customer specific solutions.

The company takes great pride in fostering a strong relationship with each and every customer. Today, GENTEC® sells its products through a vast distribution network which extends to thousands of customers worldwide.

Needle Valves

NV11, NV12, NV13, NV14 SERIES NEEDLE VALVES

Features

- Maximum operating pressure: 5000 psi (345 bar)
- V type stem is standard; R, K, and N type stem are also available
- End connections: GENLOK and NPT
(please refer to the specification tables for available dimensions)
- Straight pattern is standard, angle pattern is also available
- Panel mounting available
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Every valve is factory tested for leakage at 1000 psi (69 bar)
Adjust packing nut when working pressure is higher than 1000 psi to prevent leakage.

Materials of Construction

Components	Material
1 Round Handle / Bar Handle	ABS with brass inset / Aluminium

Needle Valves

NV42, NV43 SERIES NEEDLE VALVES

Straight Pattern

Angle Pattern

Features

- Maximum operating pressure: 6000 psi (413 bar)
- Operating temperature:
 - 65°F ~ 200°F (-53°C ~ 93°C), with PCTFE packing
 - 65°F ~ 600°F (-53°C ~ 315°C), with PEEK packing
- Nominal diameter: 3.5 mm, 6.5 mm
- Panel mounting available
- Straight pattern is standard, angle pattern is also available
- Connections: 1/4" NPT, 3/8" NPT and 1/2" NPT
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Every valve is factory tested for leakage with Nitrogen at 6000 psi
- N type stem is available for moderate flow control

Needle Valves

NV53 SERIES NEEDLE VALVES

Components	Material
1 T-handle	Aluminium
2 Packing Nut	416
3 Regulating Valve Stem	316 SS
4 Lock Nut	316 SS
5 Bonnet	316 SS
6 Panel Nut	316 SS
7 Adapter	316 SS
8 Sealing Gasket	Flexible graphite
9 Joint Nut	316 SS
10 Body	316 SS

Features

- Maximum operating pressure: 6000 psi (413 bar)
- Operating temperature: -65°F ~ 1200°F (-53°C ~ 648°C)
- Nominal diameter: 11.1 mm
- Flexible graphite packing
- Panel mounting available
- End connections: socket welded, GENLOK and NPT
- Straight pattern is standard, angle pattern is also available
- Factory tested to withstand pressure and temperature of 7200 psi and 600°C respectively
- Every valve is tested for leakage with nitrogen at 6000 psi (Please provide us with specific instructions should you have specific request/requirements regarding leakage testing)

Ball Valves

■ BV13, BV14, BV15, BV16, BV18 SERIES BALL VALVES

■ Features

- Maximum operating pressure: 3000 psi (207 bar)- BV15
2500 psi (172 bar)- others
- Operating temperature: 50°F ~ 150°F (10°C ~ 65°C)
- Handle indicates the flow direction
- End connections: GENLOK, NPT and FSR
(please refer to the tables on next page for the specifications)
- Straight pattern is standard, angle pattern is also available
- Panel mounting available
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Every valve is factory tested for leakage at 1000 psi
Adjust packing nut when the working pressure is higher than 1000 psi to prevent leakage.

Ball Valves

■ BV33, BV34, BV35 SERIES BALL VALVES

■ Features

- Switching (3-way) valve
- Maximum operating pressure: 2500 psi (172 bar)
- Operating temperature: 50°F ~ 150°F (10°C ~ 65°C)
- Handle indicates the flow direction
- End connections: GENLOK and NPT
(Gas enters from the bottom port, and exits to either the left or right port)
- Switchable flow paths
- Panel mounting available
- Top-loaded design allows in-line valve adjustment
- Bidirectional flow allows easy cleaning and purging
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Every valve is factory tested for leakage at 1000 psi
Adjust packing nut when the working pressure is higher than 1000 psi to prevent leakage.

Ball Valves

■ BV42 SERIES BALL VALVES

■ Features

- Crossover (4 way) valve
- Maximum operating pressure: 2500 psi (172bar)
- Operating temperature: 50°F ~ 150°F (10°C ~ 65°C)
- End connection: NPT
- Capsule packing allows crossover of two streams
- Panel mounting available
- Top-loaded design allows in-line adjustment
- Multi-directional flow allows easy cleaning and purging
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Every valve is factory tested for leakage at 1000 psi
Adjust packing nut when working pressure is higher than 1000 psi to prevent leakage.

Ordering Information

■ BV52 SERIES BALL VALVES

■ Features

- Switching (5 way) valve
- Maximum operating pressure: 2500 psi (172bar)
- Operating temperature: 50°F ~ 150°F (10°C ~ 65°C)
- Handle indicates flow direction
- End connection: Female NPT
- The gas enters through the bottom port and exits in one of four ports
- The spring-loaded indexing pins on the handle assures accurate alignment and maximize flow
- Panel mounting available
- Top-loaded design allows in-line valve adjustment
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Every valve is factory tested for leakage at 1000 psi
Adjust packing nut when the working pressure is higher than 1000 psi to prevent leakage.

■ DV11 SERIES DIAPHRAGM VALVES

■ Features

- Suitable for high purity applications
- NPT connection
- Internal spring-less design
- Metal-to-metal seal minimizes particle generation and ensures purity integrity in the flow passages
- Long service life
- 100% Helium leak tested

■ Materials

- Body: Plated Brass
- Seat: PCTFE
- Diaphragm: Elgiloy®

■ Specifications

- Cv: 0.17
- Leak Rate
 - Inboard: 1×10^{-9} atm cc/sec He
 - Across Seat: 4×10^{-9} atm cc/sec He
- Proof Pressure: 150% of maximum operating pressure
- Burst Pressure: 400% of maximum operating pressure

■ Operating Conditions

- Maximum operating pressure: 300 psi (20 bar)
- Minimum operating pressure: Vacuum
- Operating temperature: 40°F ~ 150°F (-40°C ~ 65°C)

■ DV86 SERIES DIAPHRAGM VALVES

Manual
(High Pressure)

■ Features

- Suitable for ultra high purity applications
- Both manual and pneumatic actuation are available
- End connections: Face seal fittings (FSR) and butt welded
- Internal spring-less design and metal-to-metal seal minimizes particle generation and ensures “purity integrity” in the flow passages
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively
- Long service life
- 100% Helium-leak tested

Pneumatic
(Low Pressure)

■ Specifications

- Body: 316L stainless steel
- Seat: PCTFE*, Vespel®**
- Diaphragm: Elgiloy®
- Maximum operating pressure:
300 psi (20 bar), 3500 psi (240 bar)
- Operating temperature:
-40°F ~ 150°F (-40°C ~ 65°C)
- Cv: 0.3
- Standard Ra: 15 µin (BA)
Optional: 7 µin (EP)

* Standard Material

Gauge Valves

■ GV1 SERIES GAUGE VALVES

■ Features

- Compact construction
- Non-rotating ball tip design
- Multi-port allows versatile positioning of gauges and pressure switches
- Inlet Connection: 1/2" or 3/4" NPT
Outlet connection: 1/2" Female NPT
- Bonnet Lock Pin helps prevent accidental separation of bonnet from the body
- Maximum operating pressure: 6000 psi (414 bar)
- Leakage across seat: < 0.1 std cm³/min
- Operating temperature: -63°F ~ 450°F (-53°C ~ 232°C)
- Cleaned and degreased for oxygen service according to CGA G-4.1 and ASTM G93 Class C, respectively

Caution:

Do not mix or interchange valve components with those of other manufacturers.

Excess Flow Valves

EV12, EV13, EV14 SERIES EXCESS FLOW VALVES

Used in pipeline system to stop uncontrolled release of system media in the event of a downstream gas line rupture or disconnection, thereby saving the media and guaranteeing the system safety.

Features

- Maximum operating pressure: 6000 psi (414 bar)
- Operating temperature: 400°F (204°C)
- End Connections: GENLOK and NPT
- Connection size: 1/8" to 1/2"
- The flow through the bleed vent is less than 1% of the flow rate in the trip range

Operating Principles

The spring-loaded poppet remains in the open position during system operation. If an excess flow occurs downstream, i.e. a pressure drop, the poppet rapidly moves to the cutoff position to block all uncontrolled flow. When the pressure is balanced once again, the poppet will automatically revert to the original (open) position.

Components	Material
1 Valve Body	316 SS
2 Spring	316 SS
3 Poppet	316 SS
4 Valve Bushing	316 SS
5 Backup ring	PTFE
6 O-ring	Viton®

Materials of Construction

Pressure-Temperature Ratings

The nominal pressure depends on the end connections

Material	316 SS
Temperature °F (°C)	Operating pressure psi (bar)
-10 (-23) ~ 100 (37)	6000 (414)
200 (93)	5160 (356)

Excess Flow Valves

EV12, EV13, EV14 SERIES EXCESS FLOW VALVES

Flow Data at 70°F (20°C)

EV12 Series

EV13 Series

EV14 Series

Product Selection

Excess flow valve is used to stop uncontrolled release of flow in the event of a gas line rupture or disconnection, thereby guaranteeing the system safety. GENTEC standard excess flow valves are suitable for various applications.

For example:

- EV12 Excess Flow Valve, inlet pressure of 6MPa, Peak flow rate 50 m³/h. The intersection point is within the low flow range. Therefore select an excess flow valve with medium flow or standard flow trip range. If low flow configurations are chosen, there is the possibility that the valve will trip during high flow and affect normal operation.
- EV 14 Excess Flow Valve, inlet pressure 1.5MPa, Peak flow rate 240 m³/h. The intersection point is within the medium flow range. Therefore select an excess flow valve with standard flow. In systems that contain restriction devices—such as pressure regulator, flow control valve and reducing pipe, flow through the rupture might not be sufficient to reach the trip flow. In these cases, excess valves with medium flow and low flow trip range should be selected.
- EV 13 Excess Flow Valve, inlet pressure 2 MPa, Peak flow rate 100 m³/h. System restriction flow 300m³/h. The two intersection points are within the low flow and standard flow range. Therefore select an excess flow valve with medium flow trip range which can not only avoid nuisance tripping, but also ensure effective performance under flow restriction condition.

RV31, RV32 RELIEF VALVES

Features

- 316 stainless steel construction
- RV31 series
Nominal diameter: 3.6 mm
Pressure range: 10-6000 psi (0.69~414 bar)
- RV32 series
Nominal diameter: 6.4 mm
Pressure range: 10-1500 psi (0.69~103 bar)
- End connections: 1/4 " and 1/2" NPT thread (standard), 1/4", 3/8", 1/2", 6mm, 8mm, 10mm and 12mm GENLOK are optional
- Replaceable springs for variable pressure range
- Color coded labels to identify spring range
- Various sealing materials such as neoprene and Buna-N are available for different applications

■ V200 SERIES CYLINDER VALVES

■ Features

- Maximum operating pressure: 3000 psi (207 bar)
- Internal Leakage: $< 1 \times 10^{-9}$ cc/sec He
- Operating temperature: $-4^{\circ}\text{F} \sim 158^{\circ}\text{F}$ ($-20^{\circ}\text{C} \sim 70^{\circ}\text{C}$)
- Angle pattern is the standard
- Can be mounted directly on the cylinder
- Cv: 0.3

■ Materials of Construction

Components	Material
1 Gasket	304
2 Upper Valve Stem	316 SS
3 Diaphragm	316L
4 Screw	304
5 Handle	Nylon
6 Joint Nut	316 SS
7 Slip Block	316 SS
8 Upper Locating Block	316L
9 Spring	316L
10 Bottom Valve Stem	316L
11 Bottom Locating Block	316L
12 Gasket	304
13 Valve Body	316L

■ V600 SERIES CYLINDER VALVES

Ultra High Purity Diaphragm Cylinder Valve is developed for the semiconductor industry. It is designed for use with ultra high purity gas cylinders to prevent gas leakage and achieve the low leakage rates demanded by high purity gas users.

V601
Pneumatic

V600
Manual

■ Features

- Manual and actuated versions are available based on a common body design
- Suitable for most special gases including variants for oxygen and highly corrosive gases such as chlorine and hydrogen chloride
- Final assembly and testing is carried out under class 10 clean room conditions
- Designed for the low leakage rates demanded by high purity gas users
- Non tied-diaphragm construction; the diaphragms act directly on the seat to close the valve, which minimizes dead space and wetted area
- Mechanically supported and retained valve seat to minimize deformation under load and seat lift under reverse flow conditions
- The diaphragm isolates the operating mechanism from the process fluids
- The one-piece, non-welded construction improves durability
- To prevent the shedding of particulate contamination, there are no sliding, rotating or rubbing components in the flow path
- Inlet and outlet port configurations are available to suit all known industry standards. The same valve family can be used for all fluids in all market areas
- For transportation the actuator can be locked closed to prevent shock induced leakage
- The outlet port is sealed and protected by a cap retained by a chain
- The valve mechanism incorporates secondary sealing for enhanced safety

■ Specification

- Working pressure: 3300 psi (230 bar)
- Suitable for spec gas applications, including toxic and corrosive gases
- Nominal Bore: 4 mm
- Operating temperature: -4°F ~ 150°F (-20°C ~ 65°C)
- Outboard (gland) Leak rate: $< 1 \times 10^{-9}$ mbar l/s (200bar He)
- Inlet/Outlet (seat) Leak rate: $< 1 \times 10^{-8}$ mbar l/s (200bar He)
- Cv: 0.3

■ V600 SERIES CYLINDER VALVES

■ Materials of Construction

- BODY - 316L stainless steel, 316L VAR stainless steel
- SEAT - PCTFE, Kynar 740, Vespel SP21 or Zytel 103 (Nylon)
- DIAPHRAGM - Elgiloy

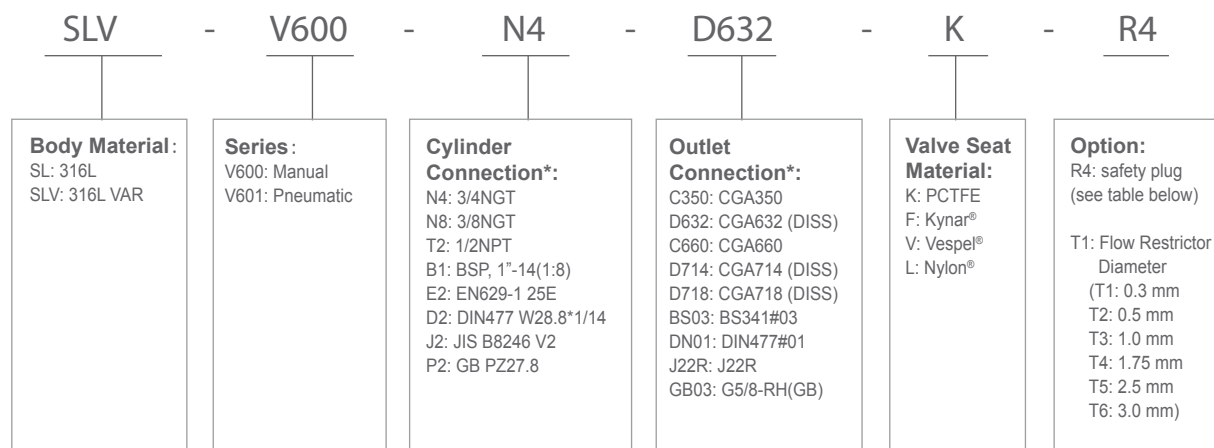

No lubrication is used in the flow passages. The seat materials are chosen for maximum compatibility, maintaining gas purity and integrity.

Please feel free to contact Genstar if you have any questions.

■ Actuator Specification

- A normally-closed actuator is available for all valves
The valve is opened by applying pressure and is closed by spring return
The valve can be locked in the closed position during for additional safety
- Pilot pressure: 70 ~ 120 psi (5 ~ 8 bar)
- Actuating medium: Air or Nitrogen
- Pilot Port: 1/8" NPT
- Materials of Construction: Stainless Steel, Nickel Aluminium Bronze and Hard Anodized Aluminium Alloy
